microwave and millimeter wave non destructive testing and evaluation ndt e is generally understood to mean using high frequency electromagnetic energy to inspect and characterize materials and structures in spite of possessing some distinct advantages in certain applications to other ndt e techniques microwave ndt e has only found compared limited practical application during the past 45 years these advantages include lack of a need for contact between the sensor and the object being inspected the ability to penetrate dielectric materials and superior sensitivity to certain material constituents and flaws one factor contributing to this minimal acceptance by the ndt e community has been a generally poor understanding in this community of the theory and practice that underlie the technology this situation exists partly because of a paucity of microwave ndt e textbook and reference material some chapters reviews and books aimed at filling this need have been published in the past but for the most part this material is based on the use of older microwave technology however during the past ten years great strides have been made in terms of the cost size and ease of use of microwave components in addition recent advances in modeling and measurement techniques have expanded the range of applications for microwave ndt e such applications include inspecting modern materials such as composites detecting and characterizing surface flaws and evaluating the compressive strength of cement structures these advances have created an urgent need for up to date textbook material on this subject

the authors of this book question the assumptions of the psychometric paradigm that underlie virtually all criterion referenced and standardized tests used in north american schools they make a compelling case for a new science of educational testing and

assessment one that shifts decision making from central administration to individual schools and communities harold berlak argues that the concept of tests as scientific instruments validated by technical experts is anachronistic and self contradictory he makes a case for a contextual paradigm an approach which assumes that consensus on educational goals and national testing programs is neither possible nor desirable assessment practices in a democratic society must acknowledge and affirm differences in values beliefs and material interests among individuals and groups over the purposes and practices of schooling
